Influenza (the flu) and colds are two of the most common respiratory infections. Highly contagious, the viruses that cause colds and flu are spread via droplets of fluid that are expelled from the body when an infected person sneezes, coughs or speaks. It’s nearly impossible to completely avoid these bugs — adults average two to four colds each year and children catch between six and eight. (1) But if a little extra hand-washing can save you a week or more of sniffling, shivering misery, it’s time well spent.

Cold and Flu Prevention

What’s the difference?
Because colds and flu cause similar symptoms, it’s easy to confuse the two. Many people refer to a bad cold as “the flu,” and it can be difficult or even impossible to tell the difference between them based only on symptoms. (2)

Generally, a cold is less intense than the flu, with the symptoms coming on more gradually. Between one and three days after you’re exposed to a cold virus, you’ll begin to notice symptoms like a runny nose, sneezing, a scratchy throat, coughing and congestion. Fever is common in infants and young children, and smokers usually will experience more severe symptoms than non-smokers. In the United States, colds account for more visits to the doctor than any other illness or condition. You can expect a cold to last about a week, but it can linger, especially in children, the elderly and those in poor health. (3)

Influenza infections last longer, and severe symptoms come on suddenly. According to the American Lung Association, many people who get the flu say it’s “like being hit by a truck.” Symptoms include muscle and body aches, chills, headache, high fever, cough, sore throat, and fatigue. Most people recover in two weeks, but others — especially the elderly — can feel fatigued and weak long after other symptoms have disappeared. (4)

Potential Complications (1)
Colds clear up on their own, without medication. But the cold virus can leave you vulnerable to other infections, including sinus infections, ear infections and bronchitis. And if you have a chronic lung disease like asthma, chronic bronchitis or emphysema, a cold can cause a flare-up that can last for weeks after you’ve stopped sneezing.

The flu can lead to sinusitis, bronchitis and ear infections, as well as more serious complications, including a post-infectious cough that lasts for months after the infection. This cough can make it difficult to sleep and can develop into pneumonia that requires hospitalization. It can even cause death in elderly people and those with chronic diseases or weakened immune systems.
Prevention

It’s next to impossible to completely avoid cold or flu viruses, but prevention is simple. According to the Centers for Disease Control and Prevention, hand washing is the most important way to prevent the transmission of disease. See the sidebar for information about proper hand washing.

- Wash your hands after touching someone who is ill or after touching an object they’ve touched. Wash for 15 seconds using soap and warm water.
- Keep your hands away from your eyes, nose and mouth unless you’ve washed your hands – most germs are spread from a surface to your face via your hands, not through the air.
- Clean shared surfaces like telephones, keyboards, steering wheels and doorknobs often.
- Get a flu shot every year.
- Make sleep a priority. Your body’s immune system does its best work while you’re sleeping. Lack of sleep can reduce the effectiveness of your immune system and make you vulnerable to infection.
- Stay hydrated. Drink plenty of water and avoid alcohol and caffeine, which can be dehydrating.

Treatment

You can combat much of the discomfort from colds and flu with over-the-counter medications. However, be sure that you know what ingredients are in all the drugs you’re taking to avoid taking too much. Also, check with your doctor before taking any medication if you’re pregnant, breastfeeding, on another prescription drug or being treated for an ongoing health condition. Antibiotics aren’t effective in treating viral infections like a cold or influenza, although your doctor may prescribe them if you develop a secondary infection like sinusitis or pneumonia.

Currently, no antiviral medications are available to treat the common cold, but several have been approved for preventing the flu in people who haven’t been vaccinated. Get plenty of rest, and don’t go back to your normal activity level until you feel up to it.

Washing your hands like a pro

Ever marvel at the hand-washing techniques displayed on various medical dramas? Here’s how they do it:

1. Use lots of warm, running water and liquid soap to lather your hands and wrists. Avoid bar soap, which can harbor viruses and bacteria. Scrub for at least 15 seconds.
2. Rinse with your hands pointing down so the rinse water doesn’t run up your arms.
3. Dry with a disposable paper towel – germs can live for hours on hand towels.
4. Shut off the faucet using the paper towel as a barrier so you don’t have to touch the handle.
5. Use a lotion or moisturizing cream to prevent cracks in the skin that can provide an entry point for germs and bacteria.

Visit Anthem.com for more ways to get healthy – and stay healthy.

Anthem Blue Cross and Blue Shield is the trade name of: In Colorado: Rocky Mountain Hospital and Medical Service, Inc. In Connecticut: Anthem Health Plans, Inc. In Delaware: Anthem Insurance Companies, Inc. In Kentucky: Anthem Health Plans of Kentucky, Inc. In Maine: Anthem Health Plans of Maine, Inc. In Minnesota: HealthPartners Insurance Company and HealthPartners Management Company, Inc. In Missouri: RightCHOICE® Managed Care, Inc. (RMC), Healthy Alliance® Life Insurance Company (HALIC), and HMHC Missouri, Inc. RIT and certain affiliates administer non-HMO benefits underwritten by HALIC and HMO benefits underwritten by HMHC Missouri, Inc. RIT and certain affiliates only provide administrative services for self-funded plans and do not underwrite benefits. In Nevada: Rocky Mountain Hospital and Medical Service, Inc. In New Hampshire: Anthem Health Plans of New Hampshire, Inc. In Ohio: Community Insurance Company. In Virginia: Anthem Health Plans of Virginia, Inc. (doing business in Northern Virginia as Blue Cross and Blue Shield of Virginia, in the towns of Henrico and the area east of State Route 123.) In Wisconsin: Blue Cross Blue Shield of Wisconsin (“BCBSWI”) underwrites or administers the PPO and indemnity policies; Compcare Health Services Insurance Corporation (“Compcare”) underwrites or administers the HMO policies; and Compcare and BCBSWI collectively underwrite or administer the POS policies. Independent licensees of the Blue Cross Blue Shield Association. ** ANTHEM is a registered trademark.
