Anthem Blue Cross and Blue Shield
Virginia Only:
Select Brachytherapy, IMRT CPT Codes to Require Prior Authorization

Effective **May 1, 2016**, Anthem Blue Cross and Blue Shield in Virginia will require prior authorization of the following outpatient radiation therapy CPT codes for our individual Medicare Advantage members:

- Brachytherapy 77316, 77317 and 77318
- Intensity Modulated Radiation Therapy (IMRT) 77386 and G6016

Prior authorization requests will be handled by AIM Specialty HealthSM (AIM), an affiliate of Anthem.

Prior authorization can be obtained by contacting AIM at [https://www.providerportal.com/](https://www.providerportal.com/) or (800) 714-0400.

For the provider to receive a benefit payment under the terms of the contract, the health plan must authorize or precertify the covered services prior to them being rendered. Failure to obtain a prior authorization will result in an administrative denial. >

Members cannot be billed for an administrative denial.

If you do not notify us within the required timeframe, you may file an appeal. As part of the appeal, providers must demonstrate that they did notify Anthem or attempted to notify Anthem AND that the service is medically necessary. Anthem also reminds all providers -- network physicians and facilities -- that they cannot bill the member if the services are denied for the failure to obtain a required precertification.

Prior Authorization requirements for individual Medicare Advantage members are available to the contracted provider by accessing the Provider Self-Service Tool within Availity. Go to Auths and Referrals/Authorizations from the left navigation menu. Select Anthem Medicare Advantage from the drop down box. You will be directed to the Medicare Advantage Precertification site. Providers will find precertification requirements there as well via the Precertification look-up tool. Providers also may contact Provider Services at the number on the back of the member’s ID card.

For treatment plans that are scheduled to begin on or after **May 1, 2016**, contact AIM for prior authorization for the outpatient radiation therapy modalities listed above.

Radiation therapy performed as part of an inpatient admission will continue to be reviewed through Anthem’s inpatient review process.

**Required Information for Radiation Therapy Requests**
Please use the checklist below as a guideline to help ensure you have all the information necessary for a radiation therapy request:
✓ Treatment Planning and Treatment start date (Date of Service)
✓ Member's identification number, name, date of birth, and health plan
✓ Ordering physician information (name, location)
✓ Radiation therapy provider information (name, location)
✓ Treatment modality being requested (for example, IMRT, SBRT, SRS)
✓ Cancer type, and stage
✓ Goal (curative, palliative)
✓ Pathology (e.g., squamous cell for lung cancer)
✓ Performance status
✓ Body part
✓ Patient age, height, weight, gender
✓ Whether a boost will be administered
✓ Total dose, fractions, and dose per fraction
✓ Clinical symptoms/indications (intensity/duration)
✓ Servicing provider information (name, location)
